

Clean-up

Guide to operators at the airport

Common guide for

Stockholm Arlanda Airport.

Bromma Stockholm Airport

Göteborg Landvetter Airport

Malmö Airport

**Swedavia
Airports**

Clean-up measures

Whoever causes or discovers a discharge must always immediately:

- If possible stop/limit the discharge being released
- Prevent the discharge from reaching drains, non-hardened surfaces and/or watercourses
- Alert the airport's rescue service using the **contact information on the extranet**
- Start clean-up

Important!

If it is not known how hazardous the spill is – Do not endanger yourself, but alert and await the arrival of the airport rescue service.

In the event of the discharge of flammable substances, where possible:

- secure the area from vehicles, sources of heat or other items that can cause the formation of sparks or make the situation worse.

1. Sprinkle Absol over the spill.

2. Work it in using a broom. Repeat the procedure until the surface is clean and dry

3. The container for Absol contains a bag. The Absol is collected in it and delivered to the environmental station for destruction.

4. The clean-up is not considered complete and the site must not be left until the spill and all Absol are taken care of.
